

[Apache Openoffice User Manual](#)

The screenshot displays two software windows side-by-side. The left window is LibreOffice Calc, titled 'cover.ods'. It contains a spreadsheet with two columns: 'Attempt' (A1-A18) and 'Rolling time (s)' (B1-B18). A scatter plot titled 'RipStik Learning Curve' is shown, plotting 'Rolling time (s)' against 'Attempt'. The plot includes a linear regression line with the equation $F(x) = 0.68x + 0.84$ and $R^2 = 0.62$. Below the plot is a video player showing a girl on a RipStik. The right window is Gnumeric, titled 'boxplot.gnumeric'. It displays a boxplot comparing two samples, 's1' and 's2'. Sample 's1' has values from 10 to 120, and sample 's2' has values from 10 to 120. A calculator window is open in the foreground, showing the formula $iqr(10,20,30,40,50,60,70,80,90,100,110,120)$ and the result $= 65$.
