Steinberg Nuendo 551 Setup Key. 3 main window. The active window for the audio production. The Windowed mode is the normal display mode for the Nuendo audio production program. The main window consists of 4 panels, each panel providing a specialized set of tools for different types of activities. With the Windows on your computer will be not be able to have the following options in their windows. Panel 1 Main panel includes editing audio material. In this panel there is a track window and a mixer window. The track window shows the currently active track in your audio project. In the mixer window you can set the audio levels and pan the different channels to any position. Using the mouse you can click on the waveform that represents the audio material. This shows the current waveform of the audio signal. Panel 2 Instruments panel contains a collection of instruments that can be used for composition of musical parts. The Instrument list panel (see Figure 4.5, panel 3), contains buttons to add instruments to the current track, delete or insert an instrument from the instrument list. In the instrument panel you can add and delete instruments. To add a new instrument, use the “+” button. To edit the name of an instrument, use the mouse to select the name and click on the pencil icon (see Figure 4.5, panel 3). Panel 3 List of instruments. Panel 4 Positioning of audio clips and of the virtual instruments. In the “Layout” panel of the main panel, you can drag and drop the audio tracks in the “Layout” panel. Audio clips can be moved to any point in the audio track. The virtual instruments can also be moved to any

---

position on the virtual instrument panels. Panel 5 Scripts panel is used to create, edit, and run the composition of musical parts.

In the script panel (see Figure 4.5, panel 5) you can insert musical notes and events. You can set a tempo for the notes, the effects that they will produce, and the time at which the note will start playing. The script editor also includes a script recorder, that records a waveform to the clipboard. The waveform can then be inserted directly in the track. The audio waveform can be edited in the main window. Panel 6 Instrument settings. In the instrument panel you can set additional parameters of the current instruments. For example, the pan or volume level can be adjusted or the sound of the instrument can be changed to another sound. This is achieved by clicking on 82157476af
